

Conductive Composites launches NiBond, a new conductive epoxy

FOR IMMEDIATE RELEASE – Heber City, UT January 27, 2022

Conductive Composites has recently developed a new high-strength epoxy adhesive that not only provides superior bonding capabilities, but also provides continuity in conductivity across a wide range of surfaces. “Conductive Composites is constantly looking to our customers and markets to develop innovative products and solutions. Creating a high-quality, conductive adhesive epoxy will fill a market need, expand our product base, and provide our customers with an affordable solution.” stated Karsten Olson, VP of Marketing. NiBond uses a new class of highly-structured nickel to impart high conductivity performance at low loading levels. NiBond is ideal for applications in the aerospace, composites, communication, and industrial sectors that require the highest levels of performance to meet system requirements.

About Conductive Composites:

Conductive Composites develops and delivers conductivity-based polymer and composite solutions that answer the combined demands of conductivity and shielding performance in lightweight materials systems. Conductive Composites is a division of the Conductive Group. Visit our website at: www.conductivecomposites.com
